Stephen and Mark,

Please see attached analytical results from the 6/21/13 sampling: 22.3 ppb PCP at New Cricket Spring mouth and <1.00 ppb PCP at the weir.

Jean

Jean,

Attached is the June monthly results for the Arkwood Site. Please note that there is a qualifier for the weir analysis...the calibration curve resulted in estimating that the concentration was less than one part per billion. As you know, estimated values are generally fairly accurate but due to precision and repeatability, must be reported as estimated.

If you have any questions, please do not hesitate to contact me.

Best Regards,

Jim
